

Nothing is impossible

[Anil K. Rajvanshi](#)

Our brains and our minds are the product of same time frame as the universe. Hence we cannot think anything beyond what exists in the Universe. Thus our wildest dreams and imaginations have roots and templates somewhere in the Universe and points to the existence of ideas and design beyond our surroundings. We can access this knowledge base through enhanced mental faculties via Sanyam and Yoga.

All our discoveries, inventions or creations are therefore nothing else but rediscovering the existing knowledge.

We get this knowledge from “Knowledge Space” (KS) which may contain fundamental knowledge produced in the past and is continuously fed by the ever-increasing knowledge from various civilizations. This is similar to cyber space. A prepared and focused human mind can access knowledge from KS and I feel that great discoveries of mankind have come from such access. It is also possible that as earth moves around the sun and the solar system revolves around the center of the Milky Way galaxy, periodically we come across KS, which helps mankind to evolve. Similarly a younger civilization than ours may come across KS developed by us and thus the evolution continues.

Since we are rediscovering the truth, it means that it has always existed and is beyond space and time and part of Universal design. That is God!
